

Replication Profile (Fold-Change, Pooled Test): *Acinetobacter baumannii* Strain AB030, Exponential Phase

Strain AB030, Exponential phase. Panel C: log2 fold-change (Meropenem/untreated) per 1kb genomic window (mean of replicates A and B), plotted against normalized genomic position (y; oriC = 0, ter = ± 1). Vertical lines mark 2-fold-change thresholds (log2FC = -1, 0, +1). 4335 windows used (0 excluded for zero coverage in at least one condition): 0 above +1, 0 below -1, 4335 within ± 1 . Overall t-test p = < 0.001; overall Mann-Whitney U p = < 0.001 (both compare per-window mean read density, Meropenem vs untreated, pooled across all windows genome-wide as the sample).
