

Replication Profile (Fold-Change, Pooled Test, Transposed): *Acinetobacter baumannii* Strain ATCC 17978-VU, Exponential Phase

Strain ATCC 17978-VU, Exponential phase. Panel C: log<sub>2</sub> fold-change (Meropenem/untreated) per 1kb genomic window (mean of replicates A and B), plotted against normalized genomic position (x; oriC = 0, ter = ± 1) -- transposed axes, same data and statistics as the vertical-line version. Horizontal lines mark 2-fold-change thresholds (log<sub>2</sub>FC = -1, 0, +1). 4004 windows used (0 excluded for zero coverage in at least one condition): 88 above +1, 34 below -1, 3882 within ± 1. Overall t-test p = < 0.001; overall Mann-Whitney U p = < 0.001 (both compare per-window mean read density, Meropenem vs untreated, pooled across all windows genome-wide as the sample).
